

HM #12

Max points – 20

To do:

1. Install Drupal with Docker 4 Drupal.
2. Create car entity with 4 different data parameters.
3. Create database table for storing this data.
4. Create page with button for generating 5 cars and button for deleting all 5 cars
5. Also add page with where we can see all cars with all parametrs (table).

Expected: codebase, files, db in repo.
